Description

The ecological restoration of a forested area in Alía, Cáceres (Spain) was done in 2022-2023. 19 species were planted, all native to the region and adapted to the local conditions. Previous individuals of Pinus spp. and Eucalyptus globulus were removed to make space for the new selection of species. The planting aims to enhance biodiversity, have a positive effect on soils and provide resources to the owner. The landowner also provided irrigation and recovered historical local varieties of grapes for wine production. Furthermore, there are plans to build a sustainable eco-hostel in the plot, providing a space for recreation and environmental education as visitors will be introduced to the plantation and its benefits and also to observe the local species of animals.

Strategic choices

These are the prioritised areas that we will take action on.

- Positive impacts we can strengthen even further
- Negative impacts we can eliminate or minimise
- Knowledge gaps we need to fill

NO POVERTY

End poverty in all its forms everywhere

Impact

NO IMPACT

Motivation

The project does not influence the targets and does not change the indicators

ZERO HUNGER
